PhenoTech Presents Novel Blood Typing Technology at the Eight Annual Angel Venture Fair (AVF8)

PHILADELPHIA, April 17, 2006 -- PhenoTech, Inc., a privately held biopharmaceutical company developing novel diagnostic and therapeutic monoclonal antibodies (mAbs) announced today that it will present data on its phage-displayed mAb reagents for the automation of blood typing at the upcoming Eight Angel Venture Fair (AVF8) in Philadelphia, PA. Guy Maestre, President and Chief Executive Officer of PhenoTech will present to meeting participants on Tuesday, April 25, 2006 at 9:45 AM and at 2:30 PM at the Union League in Philadelphia, PA. PhenoTech is employing its proprietary phage display mAb production technology to develop an important new generation of blood typing reagents, which should support an improved standard of care for patients and physicians and significantly impact the economics of blood typing. This approach will provide large amounts of phage-displayed reagents which are not dependent on rare human supplies. Phage display will allow the development of reagents which cannot be obtained by current hybridoma methodology. Thanks to their superior sensitivity over currently available products, they should also better support automation technology. Furthermore, by exploiting the naturally-occurring presence of unique DNA sequences within the phage reagents, they will allow simultaneous typing (multiplexing) of the various blood cell antigens in a single well assay by our "phenotyping-by-reagent-genotyping" approach. This should provide a faster, easier and more comprehensive alternative to current 50 year old reagent technology.

About PhenoTech, Inc.

PhenoTech, Inc., based in Philadelphia, PA, is a privately held biopharmaceutical company dedicated to the discovery, development and commercialization of innovative monoclonal antibodies (mAbs) to be used in blood diagnostic and blood therapeutic applications. PhenoTech has developed a set of novel molecular technologies based on magnetic cell separation and phage display mAb discovery and production for rapidly creating and screening innovative self-replicating mAbs. PhenoTech is applying its proprietary technology to the development of innovative blood cell typing reagents and of therapeutic drugs targeting various hematologic and cardiovascular disorders.

The statements in this document, which are not historical facts, are forward-looking statements based on current expectations of future events that involve risks and uncertainties including, without limitation, risks associated with the inherent uncertainty of pharmaceutical research, product development, manufacturing, commercialization, economic conditions, the impact of competitive or generic products, product liability, the impact of legislative and regulatory compliance and obtaining approvals, and patent, and other risks and uncertainties. Forward-looking statements often contain such words as "estimate", "anticipate", "intend", "plan", "expect" or "might", "could" or "should". Research findings are not always supportable by evidence obtained from subsequent development trials and the Company can make no assurances that the development trials will yield positive results. Final review decisions made by the FDA and other regulatory agencies concerning development trial results are unpredictable and outside the influence and/or control of the Company.
